

STAAND Release 3.4 — Case Management Module Release Notes

Release Date: September 18, 2026 Module: Case Management User Stories: 3 Bug Fixes: 3

Overview

This release for the Case Management module focuses on improving data accuracy, policy compliance, and workflow reliability across several key case processes. Updates in this version address approval timing issues for quashing order communications, strengthen validation rules for Adoption and Guardianship reporting, and simplify closure-related housing plan selections.

In addition to these enhancements, several fixes have been made to improve visit tracking and case involvement calculations. Together, these changes help reduce manual correction work, improve consistency across records, and ensure staff can rely on system-generated dates and requirements during day-to-day case management activities.

New Features & Enhancements

Missing/Absent Case Processing

- **#92103 — Correct timing for Quashing Order Request Sent updates**

Adoption and Guardianship Reporting

- **#104336 — Validation added to restrict reports to one child where required**

Case and Case Person Closure

- **#104633 — Updated Housing Plan completion options for case closures**

Bug Fixes

Visit Management

- **#104621 — Fixed an issue where visit auto-updates were not occurring as expected.**
- **#104785 — Corrected visit requirement recalculations for prior months when contact notes were backdated.**

Case Processing

- **#104704 — Fixed an issue affecting Case Involvement Dates on reopened cases.**

Summary

Release 3.4 for the Case Management module delivers improvements that strengthen workflow accuracy, reporting compliance, and closure consistency. The updates in this release help ensure that critical case information is recorded at the correct stage of the process while reducing opportunities for invalid data entry and improving reliability across visit and case tracking functions.
