

STAAND Release 3.4 — Placement Module Release Notes

Release Date: September 18, 2026 Module: Placement User Stories: 1 Bug Fixes: 0

Overview

This release introduces comprehensive support for Respite Overnight placements within the Placement module. The update improves how respite-related placement requests, provider selection, placement transitions, and service log reconciliation are handled throughout the full placement lifecycle.

The new functionality helps case workers manage respite placements more consistently while also improving downstream reconciliation and payment processes for PMPS and provider services. By standardizing placement reasons, provider validation, service log generation, and placement end tracking, STAAND now supports clearer and more accurate recording of respite placement activity from initial request through completion.

New Features & Enhancements

Respite Placement Workflow Enhancements

- **#104258 — Respite Overnight Placement Service in STAAND (Respite Placement):** STAAND now provides end-to-end support for Respite Overnight placements within the Placement module. This enhancement introduces dedicated workflows and placement handling specifically designed for respite scenarios, helping case workers accurately document temporary placements while ensuring service logs and provider reconciliation processes remain aligned.

Bug Fixes

No bug fixes were included in this release for the Placement module.

Summary

Release 3.4 significantly expands the Placement module's ability to support Respite Overnight workflows from initial placement request through service reconciliation. These updates improve provider selection accuracy, placement transition tracking, service log generation, and reporting consistency, helping staff manage respite placements more effectively while supporting accurate provider reconciliation and payment processes.
