

STAAND Release 3.4 — Reports Module Release Notes

Release Date: September 18, 2026 Module: Reports User Stories: 15 Bug Fixes: 0

Overview

This release significantly expands the reporting capabilities available within the STAAND Reports module, with a strong focus on historical child welfare, investigation, foster care, hotline, and case management reporting. The new and enhanced reports provide month-to-month visibility into operational trends from 2018 to the present, supporting compliance, legal review, oversight, and organizational analysis needs.

Many of the reports introduced in this release improve access to longitudinal data related to investigations, allegations, foster care activity, screening decisions, home visits, and case outcomes. These enhancements help staff generate more complete historical reporting without requiring manual data compilation across multiple systems of record.

New Features & Enhancements

3.4 Release			
ID	Work Item Type	Title	Release Note
104574	Bug	PPR001 – PDF generated is truncated	Removed details from the PDF version.
104608	User Story	Modify Universe for In-Home Universe (PIT) Logic (tvf_GetInHome)	Resolved an issue in the universe logic. Cases previously required an active case-worker role assignment to be included in the In-Home universe. This caused cases without an assignment ID or active assignment to be incorrectly excluded. The logic has been updated so these cases are now properly included.
104626	User Story	Modify CMT023 (Children Served) – Assignment Logic & Separation ID	Updated assignment logic: Active cases with no assignment should be included in the universe. Added conditions: Assigned Administration to “In Home CCMS”

			when no assignment exists and the case type is “In-Home,” or assigned Administration to “OOH CCMS” if case type is Out-of-Home.
104972	User Story	Modify Assignment Universe View	Updated view to include Assignment Type column. Display Case Assignment or Child Responsibility. For Child Responsibility, only records where Assignment Method = “User Assigned” are counted. “System Assigned” records generated by STAAND (when assignments are made from the case screen instead of the case person screen) are excluded.
105174	User Story	Re-Grouping Exit Reasons Without Re-Running Dataset (Public Dashboard)	Modified CFSA Public Dashboard universe. Two exit reasons — “case no papered” and “court case closed but child will still be monitored” — are now added under the category “Others.”
104742	Bug	Provider address cannot be blank – CMT006	Updated logic for “Children in Foster Care” function to remove the filter on primary address for location.
